“The price you pay for precision is an inability to deal with real-world issues”

- Douglass C. North

IMPAIRED WATERS...are everywhere

A map of the United States and parts of Canada and Mexico, illustrating the extent of impaired waters. The map is overlaid with a dense network of red lines and dots, representing water bodies that are impaired. These markings are concentrated in the eastern half of the United States, particularly in the Great Lakes region and the Atlantic seaboard, but they also appear in the western half, including the Pacific Northwest and the Southwest. Major cities like Vancouver, Seattle, San Francisco, Los Angeles, Dallas, Houston, Miami, and New York are labeled. The map also shows the Great Lakes, the Gulf of Mexico, and the Rio Grande. The text 'IMPAIRED WATERS...are everywhere' is prominently displayed at the top in a large, white, sans-serif font against a dark blue background. The source 'Source: US EPA' is noted in the bottom right corner.
